

**Supplies:**

Sewing machine, cardstock, stickers, Brother ScanNCut, paint, patterned paper, pen, buttons, and sequins

I love adding a party feel to my projects with a banner, but pre-made embellishments can be so expensive! One solution? I make my own! Hand cutting can take a long time so I like to design my own and cut them out from scraps using my ScanNCut machine.

**Instructions:**

1. Draw an arc on a piece of paper. Then draw the banner pieces you want to add. Don't want to free-hand? You could make marks with a ruler or cut out a template and use it for each banner part.

2. Scan into the ScanNCut and save to the machine.

3. Place scrap(s) of patterned paper onto your ScanNCut mat. Load the saved pattern (multiple times if you would like several banners) and cut.

4. For the card background, stamp a sentiment with white paint and let dry. Then spray with colored mists and dab off the excess.

5. Stamp 'celebrate' with pink paint, let dry, then use ScanNCut to directly cut out the word.

6. To assemble this card, first place the banners and then stitch around the edges. Then place the 'celebrate' on foam adhesive and adhere, along with other stickers, buttons, and sequins.

7. To finish this (4 ¼ x 5 ½") card mount your card front onto a folded piece of cardstock.
